# Filter Flow 2000<sup>1</sup>

## Air Flow System

An air flow system that markedly improves machine operating and maintenance cost by preventing accumulation of lint and debris in the needles and sinker sections. It lowers machine temperatures and improves needle life. When using open end yarns, the improvement can be dramatic. The Filter Flow 2000 ends the need to flush the machine, preventing oil spots, oil lines and graphite lines, eliminating all associated fabric waste.

### Features

- 3/4 horse power motor
- Temperature monitor with overtemperature stopmotion
- Filter cleaning monitor with dirty filter stopmotion
- Replaceable 12" x 20" x 2" filter
- Removable air chamber covers for easy access to cylinder knitting elements
- Digital status/stopmotion readout using machine's information display computer
- Integrated design fits seamlessly on machine

### Compact Blower Unit

Allows easy access to knitting elements

Additional designs available for Monarch and all other brands of Knitting Machines.

All information in this brochure is given in good faith but without warranty.
